

"We've noticed patrons moving with greater certainty, and we're pleased that the product fits so well with our magnificent theatre. Ambiance and comfort are important to a theatre experience, and providing a fail safe way finding system enhances that for our patrons. "

Kristopher Dell,
Production manager

Using Ecoglo, The Toronto Centre for the Arts has increased their customers safety while suiting the ambiance of the theatre.

Kristopher Dell, the Production manager for the Centre needed to solve a problem that patrons occasionally had when the house lights went out in the 1,727 seat main auditorium. This was particularly the case in the orchestra where irregularly spaced steps caught some patrons by surprise in the dark. Ecoglo step edge products were a perfect solution.

The principles behind the use of Ecoglo products are simple. The photoluminescent strip absorbs natural or artificial light and then re-emits the light guiding people safely up steps and through passages in all conditions.
